The
suftesi
document class

v3.2.5 – 2024/12/04

The serif typeface is Cochineal, created by Michael Sharpe on the basis of Sebastian Kosch's Crimson. The typewriter font is Inconsolata, designed by Raph Levien and the sans serif text is typeset in Linux Biolinum, created by Philipp H. Poll.

User's guide to `suftesi`

A document class for typesetting theses, books and articles

v3.2.5 – 2024/12/04

Abstract

The standard document classes allow you to typeset beautiful documents but their layout is quite far from the stylistic requests of some humanists (mainly Italian). The `suftesi` class provides a set of “humanistic” page layouts, title styles and heading styles to typeset books, articles and theses. The styles are very simple and sober and also have the aim of finding an aesthetic harmony in the formal simplicity (see Valbusa 2012). They are largely inspired by some interesting readings, particularly *The Elements of Typographic Style* by Robert Bringhurst (1992), *Ausgewählte Aufsätze über Fragen der Gestalt des Buches und der Typographie* by Jan Tschichold (1975) and *First Principles of Typography* by Stanley Morison (1936).

A brief history

The `suftesi` class was born as a result of the course *Introduzione a L^AT_EX per le scienze umane (Introduction to L^AT_EX for the Human Sciences)* which I held at the Graduate School of Human Sciences and Philosophy (**Scienze Umane e Filosofia**) of Verona University (Italy) in June 2010. Originally thought as a class to typeset theses, through the years it has developed many new features and styles. Finally it has become the referential class of the Joint Project *Formal Style for PhD Theses with L^AT_EX* of the University of Verona.

Acknowledgments

I would like to thank Professors Paola Di Nicola, Director of the Graduate School of Human Sciences and Philosophy, and Ugo Savardi who suggested to propose the course precisely to that School; Gilberto D’Arduini, Matteo Lanza and Antonio Rinaldi, who installed L^AT_EX on the computers used during the course; Catia Cordioli, for her help in the organization of the lessons; Corrado Ferreri, responsible of the E-Learning Center, who provided the T_EX Live 2009 DVDs. Special thanks to Professors Enrico Gregorio, the Italian guru of T_EX, for the T_EXpert support and his priceless “magic formulas”, and Tommaso Gordini for his valuable advice in choosing and improving the class features during these years. I would finally thank all the participants to the course who patiently endured the four intensive lessons. This work is dedicated to them.

1 Usage

The class can be loaded as usual with:

```
\documentclass[<options>]{suftesi}
```

For using the class with the X_YL^AT_EX and LuaL^AT_EX engines you need to load the `fontspec` package (`mathspec` is an alternative only for X_YL^AT_EX) and to select a main font.

2 Class features

The following sections describe the options and commands made available by the class. All the options are in the `<key>=<value>` format. In addition to these you can also use the options defined by the standard book class (on which `suftesi` is based) except those modifying the page dimensions (`a4paper`, `a5paper`, `b5paper`, `legalpaper`, `executivepaper` and `landscape`), which are automatically disabled.

Since the possible combinations are hundreds, the simplest way to get to know the class features is to typeset one of the templates which you can find in the `/doc/latex/suftesi` folder in your L^AT_EX distribution (see also Valbusa 2012). The class files as well as the templates are also available online on the CTAN’s website at <http://www.ctan.org/pkg/suftesi>.

The class loads the packages listed in table 1 and since version 2.9.5 relies on appendix package to manage the appendices (Robertson and Wilson 2020). To get the correct label in titles, headings and table of contents, you should use the `appendices` environment.

Context	Packages

* only with FSPL styles. ** only with fewfootnotes option.

Table 1: Packages loaded by `suf t esi`

2.1 Structure

With `suf t esi` you can typeset book-style documents (with chapters), article-style documents (without chapters) and collections of papers (see section 3).

`structure` = book | article | collection default: book

`book` For typesetting texts with chapters.

`article` For typesetting articles or short theses (without chapters).

`collection` For typesetting journals or collections of articles (see section 3).

2.2 Layout

The class provides eleven page layouts (figure 1 and table 2). The standard layout (default) or `standardaureo` layout are aimed to typeset A4 documents, while the other nine layouts are particularly suitable to typeset compact books, articles or theses. For these compact layouts the `version=screen` and `version=cscreen` options are particularly useful as they show the output in its real size.

`pagelayout` = standard | standardaureo | periodical | default: standard
periodicalaureo | compact | compactaureo |
supercompact | supercompactaureo | pocketa |
pocketb | pocketc

`standard` Prints an A4 page with a typeblock of 110 mm \times 220 mm.

Layout	Dimensions (mm)				Proportions			
	Typeblock		Page		Margins		Stock	
	w	h	w	h	t/b	i/o	Typeblock	Page
standard	110	220	210	297	1:2	1:2	1:2	1: $\sqrt{2}$
standardaureo	136	220	210	297	2:3	2:3	5:8*	1: $\sqrt{2}$
compact	110	165	160	240	2:3	2:3	2:3	2:3

Table 2: The layouts of `suf` `tesi`

*5:8 \approx 1:1,618

With the following values the option prints the typeblock on a an A4 paper showing the crop marks which can be controlled by the `version` option.

`periodical` Prints a page of 17 cm \times 24 cm with a typeblock of 11 cm \times 16.5 cm.

`periodicalaureo` The same of `periodical` but with a *golden ratio* typeblock of 120 cm \times 194 mm.

`compact` Prints a page of 16 cm \times 24 cm with a typeblock of 11 cm \times 16.5 cm.

`compactaureo` The same as `compact` but with a *golden ratio* typeblock of 11.8 cm \times 19.1 cm.

`supercompact` Prints a page of 14 cm \times 21 cm with a typeblock of 10 cm \times 15.5 cm.

`supercompactaureo` The same as `supercompact` but with a *golden ratio* typeblock of 10.8 cm \times 17.5 cm.

`pocketa` Prints a page of 135 cm \times 208 cm with a typeblock of 102 cm \times 153 cm.

`pocketb` Prints a page of 140 cm \times 210 cm with a typeblock of 99 cm \times 165 cm.

`pocketc` Prints a page of 116 cm \times 193 cm with a typeblock of 90 cm \times 150 cm.

You can define your own layouts through the `\geometry` command of the `geometry` package (Carlisle and Umeki 2020) and you can change the value of `\baselineskip` too, possibly through `fontsize` (Valbusa 2020).

If you change the line spacing with the `\linespread` command, you need to add `\normalsize`.

\linespread{0.956}\normalsize

Figure 1: The eleven layouts of suf tesi

`version` = screen | cscreen | draft | final default: final

The following two options are provided to have a better view when you are typesetting and reading the PDF on the screen or for online publications.

`screen` Prints the PDF with its real dimensions.

`cscreen` The same as `version=screen` but with a centered typeblock.

The following two options are meant for printed documents.

`draft` Prints the output on a A4 paper, showing the crop marks. Useless with standard and standardaureo layouts.

`final` Prints the output on a A4 paper, hiding the crop marks. Useless with standard and standardaureo layouts.

Sometimes it is not desirable to have the crop marks on every page. In such a case you can use the `\crop[off]` command after the first page of the document.

`parindent` = $\langle dimen \rangle$ default: `\baselineskip`

Sets the indentation of the first line of each paragraph except those following a section title. You can use any unit recognized by T_EX (for example: 1em | 1cm | 17pt, ...).

Note that some packages may set the value of `\parindent` inside the `\AtBeginDocument` hook. In these cases the `parindent` option is ineffective and if you want to change the indentation you have to call `\parindent=\langle dimen \rangle` after `\begin{document}`.

2.3 Font

The default roman font is Cochineal by Michael Sharpe, the sans serif font is Linux Biolinum, designed by Philipp H. Poll, and the typewriter face is Inconsolata by Raph Levien. Cochineal is a fork of Crimson, by Sebastian Kosch, a font inspired by masterpieces like Sabon (Jan Tschichold) and Minion (Robert Slimbach). It is a very complete typeface and it offers full support for Greek and Cyrillic, real small caps (even in italic shape) and four figure styles. Moreover it provides support for mathematics through the `newtxmath` package.

The default `font` option allows you to can change the default roman font to New PX (Palatino-like), Linux Libertine, or Latin Modern. You can use other fonts as well, but in this case remember to load the `defaultfont=none` option which turns off the default font settings.

Today there are several Garamond-like fonts in T_EX Live distribution. See, for example Garamond Libre and Cormorant Garamond. The Bembo-like fonts `ETbb` and `fbf` should also be considered if you appreciate humanist fonts. In any case, before using a font, read the license carefully.

Another beautiful Garamond-like font, complete of real small caps, bold weight and mathematical support, is made available by the `garamondx` package by Michael Sharpe, which provides an extension of the `ugm` fonts, (URW)++ GaramondNo8 (see the License note in the package documentation at the web page <https://www.ctan.org/pkg/garamondx>). They are not distributed as part of T_EX Live, but they may be downloaded using the `getnonfreefonts` script. See the instructions at <http://tug.org/fonts/getnonfreefonts/>.

2.3.1 General options

`defaultfont` = none | cochineal | libertine | palatino | standard default: cochineal

- `none` Does not load any font (default with X_YLaTeX or LuaLaTeX). Use this option if you want full control over the font selection
- `cochineal` Loads the Cochineal serif, the Linux Biolinum sans serif and the Inconsolata typewriter.
- `libertine` Loads the Linux Libertine serif, the Linux Biolinum sans serif and the Inconsolata typewriter.
- `palatino` Loads the New PX serif, the Linux Biolinum sans serif and the Inconsolata typewriter. Note that the New PX font does not provide support for Greek. The `greekfont=artemisia` option offers a very good solution.
- `standard` Loads the lmodern package: Latin Modern font family and CB Greek.

`fontsize` = $\langle dimen \rangle$ default: 10 | 10pt

Sets the main font sizes for the document, changing the `\baselineskip` accordingly. This option is based on the `fontsize` package (Valbusa 2020). The $\langle fontsize \rangle$ can be given in any unit recognized by TeX (for example: 6mm, 1ex, 11.5pt). If the unit is not declared it defaults to pt. If you want to set a specific value for `\baselineskip` you have to use the `\changefontsize[$\langle baselineskip \rangle$]{ $\langle fontsize \rangle$ }` command.

`smallcapsstyle` = low | upper default: low

Effective only with `\langle level \rangle font=smallcaps` and `toc\langle level \rangle font=smallcaps` options (see sections 2.4 and 2.5). With X_YLaTeX or LuaLaTeX this option is effective only if a font selection command (such as `\setmainfont`) is given.

- `low` Prints lowercase spaced SMALL CAPITALS.
- `upper` Prints spaced SMALL CAPITALS with uppercase initials.

2.3.2 Mathematical support

The class loads by default a ‘minimal’ mathematical support for Cochineal (default), Linux Libertine or New PX via the `newtxmath` or `newpxmath` packages by Michael Sharpe. Moreover the `mathfont` option is provided to extend or disable the support for mathematics when using these fonts. These non-standard fonts have a very good mathematical support but if you aim at typesetting high mathematics the Latin Modern font family remains, of course, the better choice: `defaultfont=standard`.

If some of the loaded packages conflict or if you simply want to change some of the default font settings you should first reset the font default with `defaultfont=none` option and then load the packages in the right order and with your favorite options.

`mathfont` = none | minimal | extended default: minimal

Effective only with Cochineal, Libertine and New PX fonts.

- none** Do not load any mathematical support (default with $X_{\text{L}}\text{A}\text{T}_{\text{E}}\text{X}$ or $\text{Lua}\text{L}\text{A}\text{T}_{\text{E}}\text{X}$). Use this option if you need some packages that have to be loaded before `newtxmath` and `newpxmath`.
- minimal** Loads `newtxmath` (for Cochineal and Linux Libertine) or `newpxmath` (for PX Fonts).
- extended** Loads the previous option plus the `amsthm` and `mathalpha` packages.

2.3.3 Greek support

The Cochineal default font is complete of Greek and Cyrillic. Anyway the class provides the `greekfont` option to select four different Greek fonts for use with the roman typeface set by the `defaultfont` option (except for the `defaultfont=standard` option, i.e. with Latin Modern font family which uses the CB Greek by default). These fonts are: GFS Bodoni, GFS Artemisia, GFS Porson (by the Greek Font Society) and CB Greek (by Claudio Beccari). You may, of course, choose a different font but in this case, as previously cleared, remember to load the `defaultfont=none` option.

`greekfont` = none | artemisia | porson | bodoni | cbgreek default: none

Actually useless with `defaultfont=none` and not available with `defaultfont=standard` options.

- none** Does not load any Greek font (default with $X_{\text{L}}\text{A}\text{T}_{\text{E}}\text{X}$ or $\text{Lua}\text{L}\text{A}\text{T}_{\text{E}}\text{X}$).
- artemisia** Loads the Artemisia font by the Greek Font Society.
- porson** Loads the Porson font by the Greek Font Society.
- bodoni** Loads the Bodoni font by the Greek Font Society.
- cbgreek** Loads the standard CB Greek font by Claudio Beccari.

2.4 Sectioning

2.4.1 Options

In the following options *<level>* can be part, chap, sec, subsec, subsubsec, par, subpar. You can see some combinations of these options in figure 2.

<level>font = roman | italic | smallcaps

default: roman

Figure 2: Six examples of section titles that can be obtained combining the class options

- `roman` Prints the $\langle level \rangle$ title in roman.
- `italic` Prints the $\langle level \rangle$ title in *italic*.
- `smallcaps` Prints the $\langle level \rangle$ title in SPACED SMALL CAPS
- $\langle level \rangle style = left | center | right | parleft | parcenter | parright$ default: left
- `left` Aligns the $\langle level \rangle$ title on the left.
- `center` Centers the $\langle level \rangle$ title.
- `right` Aligns the $\langle level \rangle$ title on the right.
- `parleft` As left but with the title below the number.
- `parcenter` As center but with the title below the number.
- `parright` As right but with the title below the number.
- $\langle level \rangle numstyle = arabic | roman | Roman | dotarabic | dotroman | dotRoman$ default: arabic/Roman (part)
- `arabic` Arabic $\langle level \rangle$ number.
- `roman` Small caps lowercase roman $\langle level \rangle$ number.
- `Roman` Uppercase roman $\langle level \rangle$ number.
- `dotarabic` As arabic but followed by a dot.
- `dotroman` As roman but followed by a dot.
- `dotRoman` As Roman but followed by a dot.

`partpage = true | false` default: false

Effective only with `structure=article`.

- `true` Prints the part title in a separate page as in `structure=book`
- `false` Prints a part title similar to the one used in the standard `article` class.

2.4.2 Commands

The commands in this section are experimental. They provide a fast way to customize the format of section titles and numbers. Note that in some cases you will have to manually adjust the spacing accordingly, using `\titlespacing`, `\hspace`, `\vspace`, and so on.

Below `<level>` can be `part`, `chap`, `sec`, `subsec`, `subsubsec`.

`\<level>font{<definition>}`

Changes the font of the `<level>` title.

`\<level>numfont{<definition>}`

Changes the font of the `<level>` number.

For example, if you used the `chapfont=smallcaps` option, you can change the size of the chapter title accordingly with:

```
\chapfont{\fontsize{13}{17}\scshape\lsstyle\expandafter\MakeLowercase}
```

Combining these commands you can get something like this (or something worse/better):

```
\documentclass[pagelayout=periodical\partnameaureo,11pt,
version=cscreen,chapstyle=parright]{suftesi}

\usepackage{xcolor,lipsum}

\chapfont{\bfseries\sffamily\scshape\LARGE}
\secfont{\sffamily\fontsize{14.5}{15.5}\selectfont}

\chapnumfont{\hspace{1cm}\hbox{\bfseries\fontsize{100}{100}\selectfont%
\color{gray}\arabic{chapter}}\hspace{-1cm}}
\secnumfont{\bfseries---\,\arabic{chapter}.\arabic{section}}

\begin{document}

\chapter{Lorem ipsum dolor sit amet, consectetur adipiscing elit}

\section{Dolor sit amet}
\lipsum[1-2]

\section{Lorem ipsum dolor sit amet}
\subsection{Dolor sit amet}
\lipsum[1]
```

```
\end{document}
```

`\breakintoc`

`\breakinbody`

`\breakinbodyleft`

Manual breaks which are active in the the table of contents and in the body text respectively. The last one replaces `\breakinbody` to avoid bad line alignments when the `\level>style=left` options are used.

```
\section{This title will be break here \breakintoc inside the contents}  
\section{This title will be break here \breakinbody inside the body text}  
\section{This title will be break here \breakinbodyleft inside the body text}
```

`\chapterintro`

Prints an unnumbered introduction at the beginning of the chapter, with the correct hyperlink.

`\chapterintroname{<name>}` default: Introduzione

Changes in `<name>` the title printed by the `\chapterintro` command.

2.5 Contents lists

2.5.1 Options

`tocstyle` = `standard` | `dotted` | `ragged` | `leftpage` default: `standard`

`standard` Prints a standard table of contents with page numbers on the right.

`dotted` As the previous one but with dotted lines.

`ragged` Aligns the table of contents on the left as suggested by Bringhurst (1992).

`leftpage` Prints a table of contents with page numbers on the left margin.

`compacttoc` = `sec` | `subsec` | `subsubsec` | `par` | `subpar` default: `sec`

`sec` Prints the sections, subsections and sub-subsections in a single paragraph. Note that in this case the option `tocstyle=dotted` is ineffective as the dots are not printed for chapter entries.

`subsec` Prints the subsections and sub-subsections in a single paragraph.

`subsubsec` Prints the sub-subsections in a single paragraph.

`par` Prints the paragraphs in a single paragraph.

`subpar` Prints the subparagraphs in a single paragraph.

`toc<level>font` = `roman` | `italic` | `smallcaps` default: `roman`

Where `<level>` can be `part`, `chap`, `sec`, `subsec`, `subsubsec`, `par`, `subpar`.

`roman` Prints the $\langle level \rangle$ ToC entry in roman.
`italic` Prints the $\langle level \rangle$ ToC entry in *italic*.
`smallcaps` Prints the $\langle level \rangle$ ToC entry in SPACED SMALL CAPS

`twocolcontents` = `toc` | `lof` | `lot` | `toclof` | `toclot` | `loflot` | `all` default: `all`

This option activates the `tocstyle=ragged` option and disables the other values of `tocstyle`.

`toc` Prints the table of contents in two columns.
`lof` Prints the list of figures in two columns.
`lot` Prints the list of tables in two columns.
`toclof` Prints the table of contents and the list of figures in two columns.
`toclot` Prints the table of contents and the list of tables in two columns.
`loflot` Prints the list of figures and the list of tables in two columns.
`all` Prints all the contents lists in two columns.

`partialtoc` = `true` | `false` default: `false`

`true` Enable the `\printpartialtoc` command to get a partial ToC after the title of chapters (book structure) or sections (article structure).
`false` Disables `\printpartialtoc` command.

2.5.2 Commands

General commands

Below $\langle level \rangle$ can be `part`, `chap`, `sec`, `subsec`, `subsubsec`.

`\toc $\langle level \rangle$ font $\{\langle definition \rangle\}$`

Changes the font of the $\langle level \rangle$ title.

`\toc $\langle level \rangle$ numfont $\{\langle definition \rangle\}$`

Changes the font of the $\langle level \rangle$ number.

Below $\langle level \rangle$ can be `part`, `chap`, `sec`, `subsec`, `subsubsec`, `par`, `subpar`, `fig`, `tab`.

`\toclabelwidth $\{\langle level \rangle\}\{\langle dim \rangle\}$`

Adds the $\langle dim \rangle$ to the $\langle level \rangle$ label in the table of contents. For example, when using `chapnumstyle=Roman` you would probably need to adjust the width of the chapter label with `\toclabelwidth{chap}{1em}`.

`\tocpartname $\{\langle definition \rangle\}$` default: `\partname`

Changes the definition of “Part” name in ToC. For example:

```
\tocpartname{\begingroup\sffamily\Huge Part\endgroup}
```

To change the definition of `\partname` you have to use the commands provided by the `babel` package. For example, if the document is in Italian you will need something like this:

```
\addto{\captionsitalian}{%  
  \renewcommand{\partname}{\begingroup\sffamily\Huge Parte\endgroup}}
```

Note that in both cases the definition must be enclosed in a group to prevent it from changing what follows (i.e. the part number and the part title).

Partial ToCs

To use the command in this section load the `partialtoc` option.

`\printpartialtoc`

A command to print a partial ToC to be used after the `\chapter` and `\section` commands, respectively in `book` and `article` structures.

`\partialtoc<level>font{<definition>}`

`\partialtoc<level>labelfont{<definition>}`

Sets the font of the partial ToC `<level>` and `<level>`'s label respectively. Where `<level>` can be `sec`, `subsec`, `subsubsec`, `par`, `subpar`.

`\partialtocsize{<definition>}`

Sets the font size of the partial ToC.

`\partialtocbeforespace{<dimen>}`

default: 0pt

Sets the space before the partial ToC.

`\partialtocafterpace{<dimen>}`

default: 2\baselineskip

Sets the space after the partial ToC.

`\partialtocbeforecode{<definition>}`

Arbitrary code to be executed before the partial ToC.

`\partialtocaftercode{<definitio>}`

Arbitrary code to be executed after the partial ToC.

Here is an example of the use of these commands:

```
\partialtocsize{\footnotesize}  
\partialtocsecfont{\bfseries\itshape}  
\partialtocsubsecfont{\itshape}  
\partialtocseclabel{\bfseries}  
\partialtocbeforecode{\hrule\smallskip\textbf{Contents}\smallskip}
```

```
\partialtoaftercode{\smallskip\hrule}
```

which gives this very questionable result:

Contents

1.1 Lorem ipsum dolor sit amet, consectetur adipiscing elit, 1. 1.1.1 *Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis*, 15. 1.1.1.1 Nam arcu libero, nonummy eget, consectetur id, vulputate a, magna, 17. 1.1.1.2 Donec vehicula augue eu neque, 21. 1.1.2 *Cras viverra metus rhoncus sem*, 26. 1.1.2.1 Nulla et lectus vestibulum urna fringilla ultrices, 29. 1.1.2.2 Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas, 34. **1.2 Nulla et lectus vestibulum urna fringilla ultrices**, 35. 1.2.1 *Cras viverra metus rhoncus sem*, 39. 1.2.1.1 Donec vehicula augue eu neque, 40. 1.2.1.2 Phasellus eu tellus sit amet tortor gravida placerat, 45. 1.2.2 *Mauris ut leo*, 49.

For more radical changes you can of course define your own partial ToC with your favorite package or use the syntax of `titletoc` to redefine the levels to be customized:

- `partialtocsection`
- `partialtocsubsection`
- `partialtocsubsubsection`
- `partialtocparagraph`
- `partialtocsubparagraph`

For example, the following settings:

```
\titlecontents*{partialtocsection}[0cm]
{}
{\S\ \thecontentslabel\ \itshape}
{}
{, \thecontentspage.}

\titlecontents*{partialtocsubsection}[0cm]
{}
{\ -- \thecontentslabel\ }
{}
{, \thecontentspage.}
```

gives this result:

§ 1.1 *Lorem ipsum dolor sit amet, consectetur adipiscing elit*, 1. – 1.1.1 *Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis*, 12. – 1.1.2 *Nam arcu libero, nonummy eget, consectetur id, vulputate a, magna*, 15. – 1.1.3 *Donec vehicula augue eu neque*, 23. § 1.2 *Cras viverra metus rhoncus sem*, 29. – 1.2.1 *Mauris ut leo*, 31. – 1.2.2 *Phasellus eu tellus sit amet tortor gravida placerat*, 35. – 1.2.3 *Donec vehicula augue eu neque*, 37. § 1.3 *Nulla et lectus vestibulum urna fringilla ultrices*, 42. – 1.3.1 *Cras viverra metus rhoncus sem*, 54. – 1.3.2 *Pellentesque habitant morbi*, 56. – 1.3.3 *Nonummy eget, consectetur id*, 63.

2.6 Headers and footers

`headerstyle` = inner | center | plain | authortitleinner | authortitlecenter default: inner

`inner` Prints the chapter title and “Chapter $\langle n \rangle$ ” in the inner side of even and odd headers respectively, and the page number in the outer side.

`center` Centers the header and footer and puts the page number in the center of the footer.

`plain` Prints no headers and puts the page number in the center of the footer.

`authortitleinner` Prints the author’s name on the even pages and the title on the odd ones. In order to use this option the `\title` and `\author` commands are required.

`authortitlecenter` As the previous one but with centered headers and footers.

`headerfont` = roman | italic | smallcaps default: roman

`roman` Prints the headers in roman.

`italic` Prints the headers in *italic*.

`smallcaps` Prints the headers in SPACED SMALL CAPS.

`draftdate` = true | false default: false

If true it prints the string “Version of $\langle date \rangle$ ” in the footer. It requires the `\date{ $\langle date \rangle$ }` command.

2.7 Notes

2.7.1 Options

`footnotestyle` = bulged | hung | dotted | superscript default: bulged

`bulged` The footnote number protrudes beyond the left margin.

`hung` Indents the footnote text, so it will hang under the first line of the text.

`dotted` The footnote number is aligned to the left margin and followed by a dot.

`superscript` Prints a superscript footnote number aligned to the left margin.

`fewfootnotes` = true | false default: false

`true` Uses symbols instead of numbers to mark the footnotes. It is available only in documents with three footnotes per page maximum. The symbol sequence is: *, **, ***. Two \LaTeX runs are required.

`false` Uses numbers to mark the footnotes.

`marginpar` = true | false default: true

`true` Prints the marginal notes set with `\marginpar`.

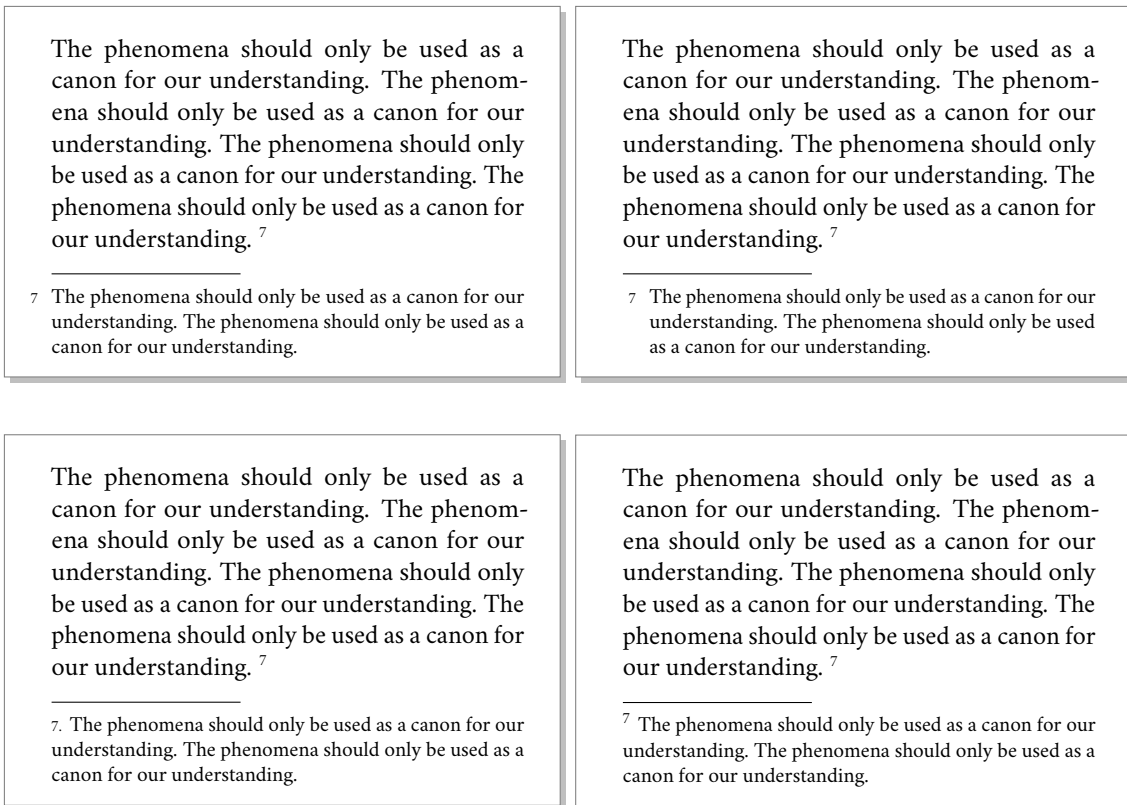

Figure 3: The four styles for the footnotes: bulged, hung, dotted, superscript

`false` Hide the marginal notes set with `\marginpar`.

`captionstyle` = `standard` | `sanserif` | `italic` | `smallcaps` default: `standard`

All these values print the caption in small size, changing the shape:

`standard` Prints the caption text and label in normal font.

`sanserif` Prints the caption text and label in sanserif.

`italic` Prints the caption text and label in *italic*.

`smallcaps` Prints only the caption label in `SPACED SMALL CAPS`.

2.7.2 Commands

`\xfootnote`[*symbol*]{*footnote text*}

Aa command to print a footnote with a discretionary symbols given in the optional argument (default: *). It does not increment the footnote counter.

`\marginpar`{*text*}

A redefinition of the standard command that prints a marginal note in italic shape and footnote size.

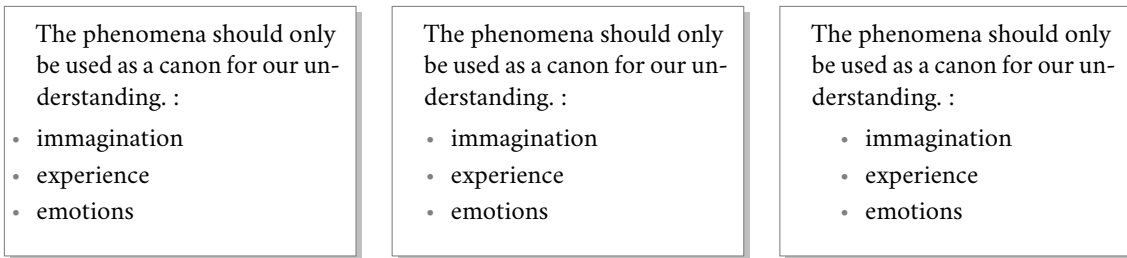

Figure 4: The three styles for the lists: bulged, aligned, indented

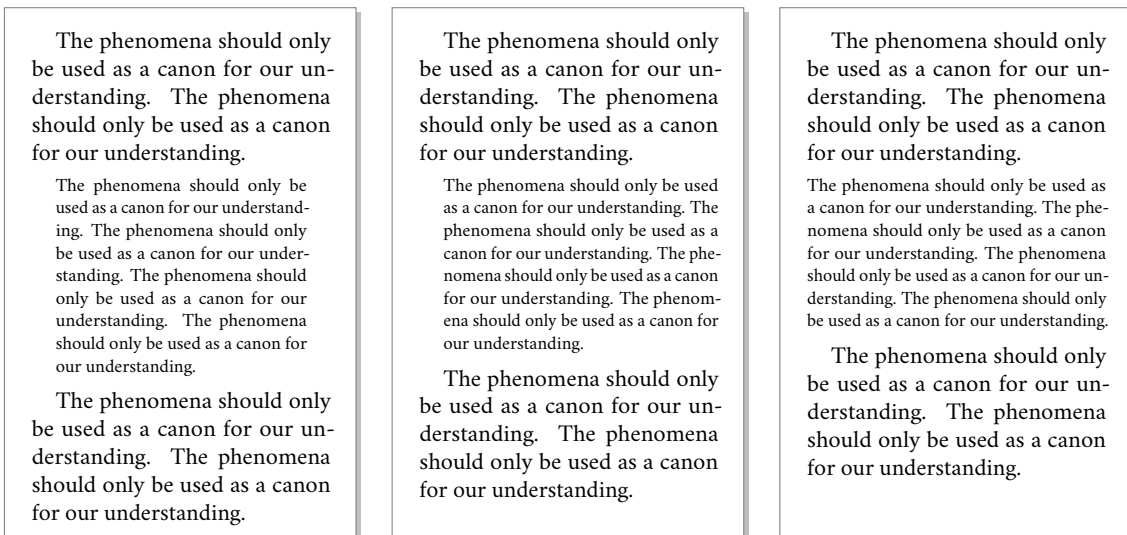

Figure 5: The three styles for the block quotations: center, right, justify

2.8 Lists and quotations

`liststyle` = bulged | aligned | indented default: bulged

`bulged` The item number or symbol protrudes beyond the left margin.

`aligned` Aligns the lists to the left margin.

`indented` Prints standard indented lists.

`quotestyle` = center | right | justify default: center

`center` Indents the block quotations on both the left and right margins.

`right` Indents the block quotations only on the left margin.

`justify` Does not indent the block quotations.

`quotesize` = small, ..., footnotesize, ..., scriptsize, ... default: footnotesize

You can use all the sizes made available by the `fontsize` package (Valbusa 2020).

Figure 6: The `suftesi` (above) and `standard` (below) title style

2.9 Pre-defined styles

These pre-defined styles are intended as shortcuts to some groups of class options. Combining them with `chapnumstyle` options you can get up to 120 variants.

`style` = `roman(1-6)` | `italic(1-12)` | `smallcaps(1-6)` default: `roman1`

`roman(1-6)` The titles of chapters and headers are printed in `roman`. The number of the chapter is on the same line in styles 1-3 and above the title in styles 4-6. The title can be printed on the left (styles 1 and 4), in the center (styles 2 and 5) or on the right (styles 3 and 6).

`italic(1-12)` The titles of chapters and headers are in *italic*. The section title is in *italic* in styles 1-6 and in `SPACED SMALL CAPS` in styles 7-12. There are three position for the title and two positions for the number as above.

`smallcaps(1-12)` The titles of chapters and headers are in `SPACED SMALL CAPS`. The title of sections is in *italic* in styles 1-6 and in `SPACED SMALL CAPS` in styles 7-12. There are three position for the title and two positions for the chapter as above.

2.10 Title page

The class provides a original and simple format for the `\maketitle` command but you can print a standard title too (figure 6). The font used for the author's name, the title and the date can be easily customized through options and commands as well as the order of author and title can be reversed.

2.10.1 Options

`maketitlestyle` = `suftesi` | `standard` default: `suftesi`

`suftesi` The `\maketitle` command prints a `suftesi`-style author-title block.

<code>standard</code>	The <code>\maketitle</code> command prints a standard author-title block.	
<code>reverseauthortitle = true false</code>		default: false
<code>true</code>	Prints the author's name above (below with <code>structure=collection</code>) the title.	
<code>false</code>	Prints the author's name below (below with <code>structure=collection</code>) the title.	
<code>titlefont = roman italic smallcaps</code>		default: roman
<code>roman</code>	Prints the title in roman.	
<code>italic</code>	Prints the title in <i>italic</i> .	
<code>smallcaps</code>	Prints the title in SPACED SMALL CAPS.	
<code>authorfont = roman italic smallcaps</code>		default: roman
<code>roman</code>	Prints the author's name in roman.	
<code>italic</code>	Prints the author's name in <i>italic</i> .	
<code>smallcaps</code>	Prints the author's name in SPACED SMALL CAPS. With this option remember to protect the <code>\thanks</code> command: <code>\author{The Author\protect\thanks{...}}</code> .	
<code>datefont = roman italic smallcaps</code>		default: roman
<code>roman</code>	Prints the date in roman.	
<code>italic</code>	Prints the date in <i>italic</i> .	
<code>smallcaps</code>	Prints the date in SPACED SMALL CAPS.	

2.10.2 Commands

`\title`[*<short title for headers>*]{*<complete title for title page>*}

Redefinition of the standard command with a new optional argument for the short title to be printed in the headers. Particularly useful with the `headerstyle=author title` option.

`\titlefont`{*<definition>*}

`\authorfont`{*<definition>*}

`\datefont`{*<definition>*}

These commands change the font of title, author's name and date printed by `\maketitle`. You can combine them with the `maketitlestyle` option. For example:

```
\titlefont{\bfseries\sffamily\scshape}
\authorfont{\itshape\sffamily}
```

2.11 Cover page

Since version 2.6 `suftesi` provides a command to print a simple cover page (figure 8), inspired by the Italian designer Bruno Munari (1966, pp. 85-89). The color used for the text and the circle as well as other graphical elements are partially customizable. Anyway, to produce a complete book cover, with spine and dust jacket, you should take a look at the `bookcover` class by Tibor Tómacs (2018).

`\makecover` [*<tikz options>*]

Prints the cover page (figure 8). This command requires `tikz` and the optional argument accepts the same options of the `\draw` command of that package (see the examples below). Commands available:

`\Cauthor`{*<text>*}

Printed at the top of the circle.

`\Ctitle`{*<text>*}

Printed below the author.

`\Csubtitle`{*<text>*}

Printed below the title.

`\Ceditor`{*<text>*}

Printed below the subtitle.

`\Cfoot`{*<text>*}

Printed in the footer.

The color of the circle can be customized using the optional argument of the `\makecover` command. For the other elements of the cover page the following commands are available. (You can load `xcolor` with your favorite option to access to many beautiful colors.)

`\Cpagecolor`{*<color>*}

The color of the cover page.

`\Ctextcolor`{*<color>*}

The color of the text inside the circle.

`\Cfootcolor`{*<color>*}

The color of the text in the footer.

You can customize the circle using the optional arguments of the `\makecover` command. Some of these *<tikz options>* require special `tikz` libraries. For example, you can add a shadow to the circle loading the `shadows` library and using the `circular drop shadow` option. The cover shown in figure 8 is obtained with the following code:

Figure 7: The frontispiece of suftesi

Figure 8: A cover page of suftesi

```

\documentclass{suftesi}
\usepackage[svgnames]{xcolor}
\usepackage{tikz}
  \usetikzlibrary{shadows}

\Author{Bruce Lee}
\Title{The Art of Kicking}
\Subtitle{How to survive in the modern societies}
\Ceditor{edited by\ Walker Texas Ranger}
\Cfoot{Punch Press\ \fbox{\bfseries P\&P}}
\Cpagecolor{white!90!black}
\Ctextcolor{white}
\Cfootcolor{black}

\begin{document}
  \makecover[ball color=DarkBlue,draw=none,circular drop shadow]
\end{document}

```

2.12 Frontispiece

The class has an original frontispiece (see figure 7) now directly available loading the frontespizio package with the suftesi option. It is meant only for Italian users (see Gregorio 2009, version 1.4 or later):

```
\usepackage[suftesi]{frontespizio}
```

Note that this frontispiece requires the use of a logo which could be restricted by some institutions. So before using it you have to be sure that you have the required permissions.

The `frontespizio` package produces a frontispiece in the standard Computer Modern typeface. If you prefer a consistent font remember to load the needed packages or commands in the `\Preamble` command:

```
\begin{frontespizio}
  \Preamble{\usepackage[osf]{cochineal}}% <===
  ...
\end{frontespizio}
```

2.13 Colophon

`\colophon`[$\langle OS \rangle$]{ $\langle name and surname \rangle$ }{ $\langle additional infos \rangle$ }

This command is provided only for Italian documents. It prints a page with a copyright notice and the colophon in the bottom of the page. For different languages use `\bookcolophon` instead (see below).

If you don't need the copyright notice, leave the second argument of the command empty:

```
\colophon[ $\langle OS \rangle$ ]{}{ $\langle additional infos \rangle$ }
```

With the `article` document structure, you can use the `\artcolophon` command (see below) as well as the `\thanks` command:

```
\author{Name Surname
  \thanks{This work has been typeset with \LaTeX, using the
  \textsf{suftesi} class by Ivan Valbusa}.
```

`\bookcolophon`{ $\langle copyright notice \rangle$ }{ $\langle attribution notice and other informations \rangle$ }

Similar to `\colophon` but fully customizable. The first argument prints its content (usually the copyright notice) in the center of the page. The second one prints its content at the bottom. For example:

```
\bookcolophon{%
  Copyright © 2007 by Ivan Valbusa}{%
  This work has been typeset with \LaTeX, using the \textsf{suftesi}
  class by Ivan Valbusa\index{Valbusa, Ivan}. The serif font is
  Cochineal by Michael Sharpe and the sans serif font is Linux
  Biolinum by Philipp H. Poll.}
```

`\artcolophon`{ $\langle copyright notice, attribution and other informations \rangle$ }

This command only has one argument. It simply prints its content at the bottom of the page. Here is an example:

```

\artcolophon{%
  This work is licensed under the Creative Commons
  Attribution-NonCommercial-NoDerivs 3.0 Unported
  License. To view a copy of this license, visit
  \begin{center}
    http://creativecommons.org/licenses/by-nc-nd/3.0
  \end{center}
  or send a letter to Creative Commons, 444
  Castro Street, Suite 900, Mountain View,
  California, 94041, USA.\\[1ex]

  Typeset with \LaTeX, using the \textsf{suftesi}
  class by Ivan Valbusa.}

```

`\finalcolophon{<colophon content>}`

The same as `\artcolophon`, but centering its content at the top of the page. It is aimed at typesetting a classical *colophon* at the end of the work.

3 The collection structure

The collection document structure is thought to create a collection of papers. Each paper has to be typeset in a separate `.tex` file inside the `article` environment:

```

\begin{article}
\author{Author}
\title{Title of the paper}
% The abstract is optional.
% \begin{abstract}
% The abstract
% \end{abstract}
\maketitle
Text of the paper
\end{article}

```

If the names of the papers are `article1.tex`, `article2.tex`, `article3.tex`, etc., then a minimal main file should be similar to this:

```

\documentclass[structure=collection]{suftesi}

\begin{document}
\input{article1}
\input{article2}
\input{article3}
\end{document}

```

3.1 Options

In addition to the following options you can use the other options of the class too. In particular, with the `chapstyle` and `chapfont` options you can customize all the section titles which are treated as a normal unnumbered chapters in the book document structure, such as *Table of Contents*, *Index*, *Bibliography*, etc.

`authortitlealign` = left | center | right default: left

`left` Aligns the author-title block on the left.

`center` Centers the author-title block.

`right` Aligns the author-title block on the right.

`titlefont` = roman | italic | smallcaps default: roman

`roman` Prints the title of the articles in roman.

`italic` Prints the title of the articles in *italic*.

`smallcaps` Prints the title of the articles in SPACED SMALL CAPS.

`authorfont` = roman | italic | smallcaps default: roman

`roman` Prints the author's name in roman.

`italic` Prints the author's name in *italic*.

`smallcaps` Prints the author's name in SPACED SMALL CAPS. With this option remember to protect the `\thanks` command:
`\author{The Author\protect\thanks{...}}`.

`toctitlefont` = roman | italic | smallcaps default: italic

`roman` Prints the title ToC entry in roman.

`italic` Prints the title ToC entry in *italic*.

`smallcaps` Prints the title ToC entry in SPACED SMALL CAPS.

`tocauthorfont` = roman | italic | smallcaps default: roman

`roman` Prints the author's name ToC entry in roman.

`italic` Prints the author's name ToC entry in *italic*.

`smallcaps` Prints the author's name ToC entry in SPACED SMALL CAPS.

3.2 Commands

`\collectiontitlepage`

Typeset the title page of the collection.

`\collectiontitle`{*<The Title of the Collection>*}

Sets the title of the collection.

`\collectioneditor{⟨The Editor(s)⟩}`

Sets the editor(s) of the collection.

4 Backward compatibility

`documentstructure` = book | article | collection default: book

An alias for structure

`defaultfont` = compatibility

Loads the fonts of suftesi v2.3 (and previous): Palatino (mathpazo), Iwona, Bera Mono. To get the default Greek font of those versions (GFS Artemisia) add the `greekfont=artemisia` option.

`crop` = true | false default: true

An alias for the old options `version=draft` and `version=center` respectively.

`parindent` = 1em, 1.5em

An alias for the old options `parindent=compact` and `parindent=wide` respectively.

`style` = FSPLa | FSPLb | FSPLc

These styles are only meant to typeset a doctoral thesis respecting the features required by the Joint Project *Formal Style for PhD Theses with L^AT_EX* of the Verona University (Italy).

`\FSPLcolophon{⟨Name Surname⟩}`

A command is provided to typeset the colophon according to the FSPL styles.

The class is based on the standard book class but the following options are disabled as they contrast with the layouts provided by the class. Specifically, the first five options are actually ineffective, while the landscape option rotates the page correctly, but sets the text width according to the class options, effectively making it unusable.

Now we can load the book class and make the related options available. The fontsize package redefines some commands of the .clo files loaded by the class. In particular, it also

defines the value of `\parindent`, which is why the `parindent` option must be declared after the `fontsize` call.

A trick to delete the class options from `\XKV@classoptionslist`, in order to avoid incompatibility with packages using options defined by `suftesi` too. Thanks to Enrico Gregorio! (In previous versions this command was placed after the option processing. Move it back if needed.)

The `etoolbox` package is required to use `\AtEndPreamble` (see 62).

```
1302 \RequirePackage{etoolbox}

The FSPL style requires a verbose colophon which uses specific icons:

```

If `version=screen` or `version=cscreen` the `crop` package is not loaded. This can create problems if the `\crop` command has been used in the document, for example to remove the crop marks from a certain page onwards (with `\crop[off]`). For this reason, the `\crop` command is defined (in practice it is rendered ineffective) so as not to produce errors if it had been used within the document.

```
1306 \ifsuftesi@screen
1307   \newcommand*\crop[1][{}]{
1308     \ifsuftesi@screencentered
1309       \geometry{hmarginratio=1:1}

1313 \fi
```

The following macro was created by Claudio Beccari. Some time later, Massimiliano Dominici suggested the use of \AtEndPreamble instead of \AtBeginDocument, to make the other language environment work.

```

We redefine the font definitions of the GFS fonts in order to scale the fonts according to the roman default. The first code for the Porson font (suftesi <v.2.4) has been written by Enrico Gregorio. Claudio Beccari successively added the code to improve the scale factor when using this greek font in combination with Palatino.

Within the appendices the chapter and section labels are literal. Using the `chapnumstyle=Roman` or `chapnumstyle=roman` options, this label is passed as an argument to `\@Roman` or `\@roman`, which however accepts only integers. For this reason we must redefine all the occurrences of `\titlecontents` in order to have `\thecontentslabel` in place of `\SUF@CHAP@contentslabel` or `\SUF@SEC@contentslabel`.

5.6.4 Breaking titles

Two commands for manual breaks active, respectively, only in the table of contents and in the body text. The solution was initially made available by Enrico Gregorio many years ago in one of the first versions of the class (at that time the commands were called `\headbreak` and `\xheadbreak`). Later, while I was working on version 3.0, I noticed an alignment problem in the chapter titles when using the `chapstyle=left` option. So I added the `\breakinbodyleft` command and updated the command names to make them more recognizable. Old names are in any case available for backwards compatibility.

In the collection document structure the articles are treated as chapters but you would not need to print in the table of contents all the sections of every article. So first of all we include in the table of contents only the author and the title of each paper. Anyway the sections inside each paper are numbered as in standard articles:

```

2950 \setcounter{tocdepth}{0}
2951 \renewcommand\thesection{%
2952     \@arabic\c@section}
2953 \renewcommand\thesubsection{%

5.14 Backward compatibility

Two environments to manually typeset the bibliography and the list of shorthands. As the class was initially designed primarily for Italian-speaking users, these two environments have an Italian name. Particularly the list of shorthands relies on `\losname` which defaults to “Sigle” (that means “shorthands”). They are not documented and are made available only for backward compatibility.

```

3333 \newenvironment{bibliografia}{%
3334   \ifsuftesi@article

A command to print an unnumbered introduction at the beginning of the chapter. The `\chapterintroname` defaults to “Introduzione” because the class was initially designed primarily for Italian-speaking users.

3376 \ifsuftesi@article
3377 \renewcommand\frontmatter{\ClassError{suftesi}

3387 \renewcommand\backmatter{\ClassError{suftesi}
3388   {Command \noexpand\backmatter is undefined\MessageBreak
3389     using 'structure=article'}}
3390 {Command \noexpand\backmatter is undefined\MessageBreak
3391   using 'structure=article'}}
3392 \else

```

Nowadays there is no longer any sense in having a different numbering for the frontmatter pages. For this reason we redefine the `\frontmatter` command in order to obtain Arabic numerals.

```

3393 \renewcommand\frontmatter{\cleardoublepage\@mainmatterfalse}
3394 \renewcommand\mainmatter{\cleardoublepage\@mainmattertrue}
3395 \fi

```

In a previous version the `\hemph` command was provided to fix a bug in the hyphenation of some italian expressions like “*dell'encyclopaedia*”. Now the bug has been fixed by the `fixltxhyph` package by Claudio Beccari. The `\hemph` command is provided only for backward compatibility. Note that the `fixltxhyph` package must be loaded after `babel` or `polyglossia`.

```

3396 \@ifpackageloaded{babel}
3397   {\AtBeginDocument{\RequirePackage{fixltxhyph}}}{ }
3398 \@ifpackageloaded{polyglossia}
3399   {\AtBeginDocument{\RequirePackage{fixltxhyph}}}{ }
3400 \let\hemph\emph

```

The first line of all sections is indented by default using $X_{\text{g}}\text{\LaTeX}$ with Italian as the main language. I think that this is incongruous with the \LaTeX default. For this reason:

```
3401 \AtBeginDocument{%
3402 \unless\ifPDFTeX% if xetex or luatex
3403   \let\@afterindenttrue\@afterindentfalse
3404 \fi}
```

Now we switch off extra space after punctuation, in accordance with the habits of European typography, especially the Italian one. The user can restore standard behavior with the `\nonfrenchspacing` command.

```
3405 \frenchspacing
```
